CORDLESS PHONES

E&OE July 2003 Subject to change without notice

Analogue cordless phones offer an operating range in average conditions of up to 200ft – 300ft. Whilst the sound quality close to the base unit is normally as good as a corded phone as you move away from the base the quality will gradually deteriorate, until at the maximum operating range above all you will hear is hiss and the phone will have stopped working. The maximum operating range will be reduced by various factors including steel framed buildings, old buildings and the particular positioning of the base. Sound quality will be adversely affected if you put the base or the handset near sources of electrical or magnetic interference such as TVs, fridges and microwaves.

Digital cordless phones normally offer around twice the range of traditional analogue cordless phones. However over the whole of the range the sound quality will normally be good with no gradual deterioration. Most modern digital phones are produced to the new GAP standard which allows interchangeability of brands of handset should this be required.

Built in TAM (Answering Machine) Some phones have a built in digital answering machine. For further explanation of answering machine features see our separate leaflet.

Extra Handsets are available on all digital and some analogue phones.

Power failure. All cordless 'phones will not work in the event that your electricity supply fails. Accordingly we would advise that you also have a corded 'phone on your line for emergency use.

Intercom On digital phones the intercom facility is only between multiple handsets registered to the same base unit. On analogue phones the intercom is generally between the handset and the base unit.

Rechargeable Batteries All cordless phone handsets are powered by rechargeable batteries that **have not been charged** prior to your purchasing your phone. We advise that you charge the handset on its base without attempting to use it for a full 24 hours before its first use. Failure to do so and subsequent failure to follow the manufacturers instructions regarding charging and discharging will shorten battery life and affect performance. The failure of batteries in these circumstances will not be covered by your warranty.

Business Use – Cordless phones are designed for use in a domestic environment in a modern home. Their use in any business or domestic environment will result in reduced performance and sound quality.

Positioning the base unit – The base must not be put on or near any other electrical apparatus or other cordless 'phone base. Failure to observe this will result in impaired performance.

This leaflet has been produced as a general guide to assist our customers. Should any of the information herein be relied on by you when making your selection from us, or if there are any other questions that you would like answered, then please ask one of our assistants to verify the details for you or to provide the additional information required.
